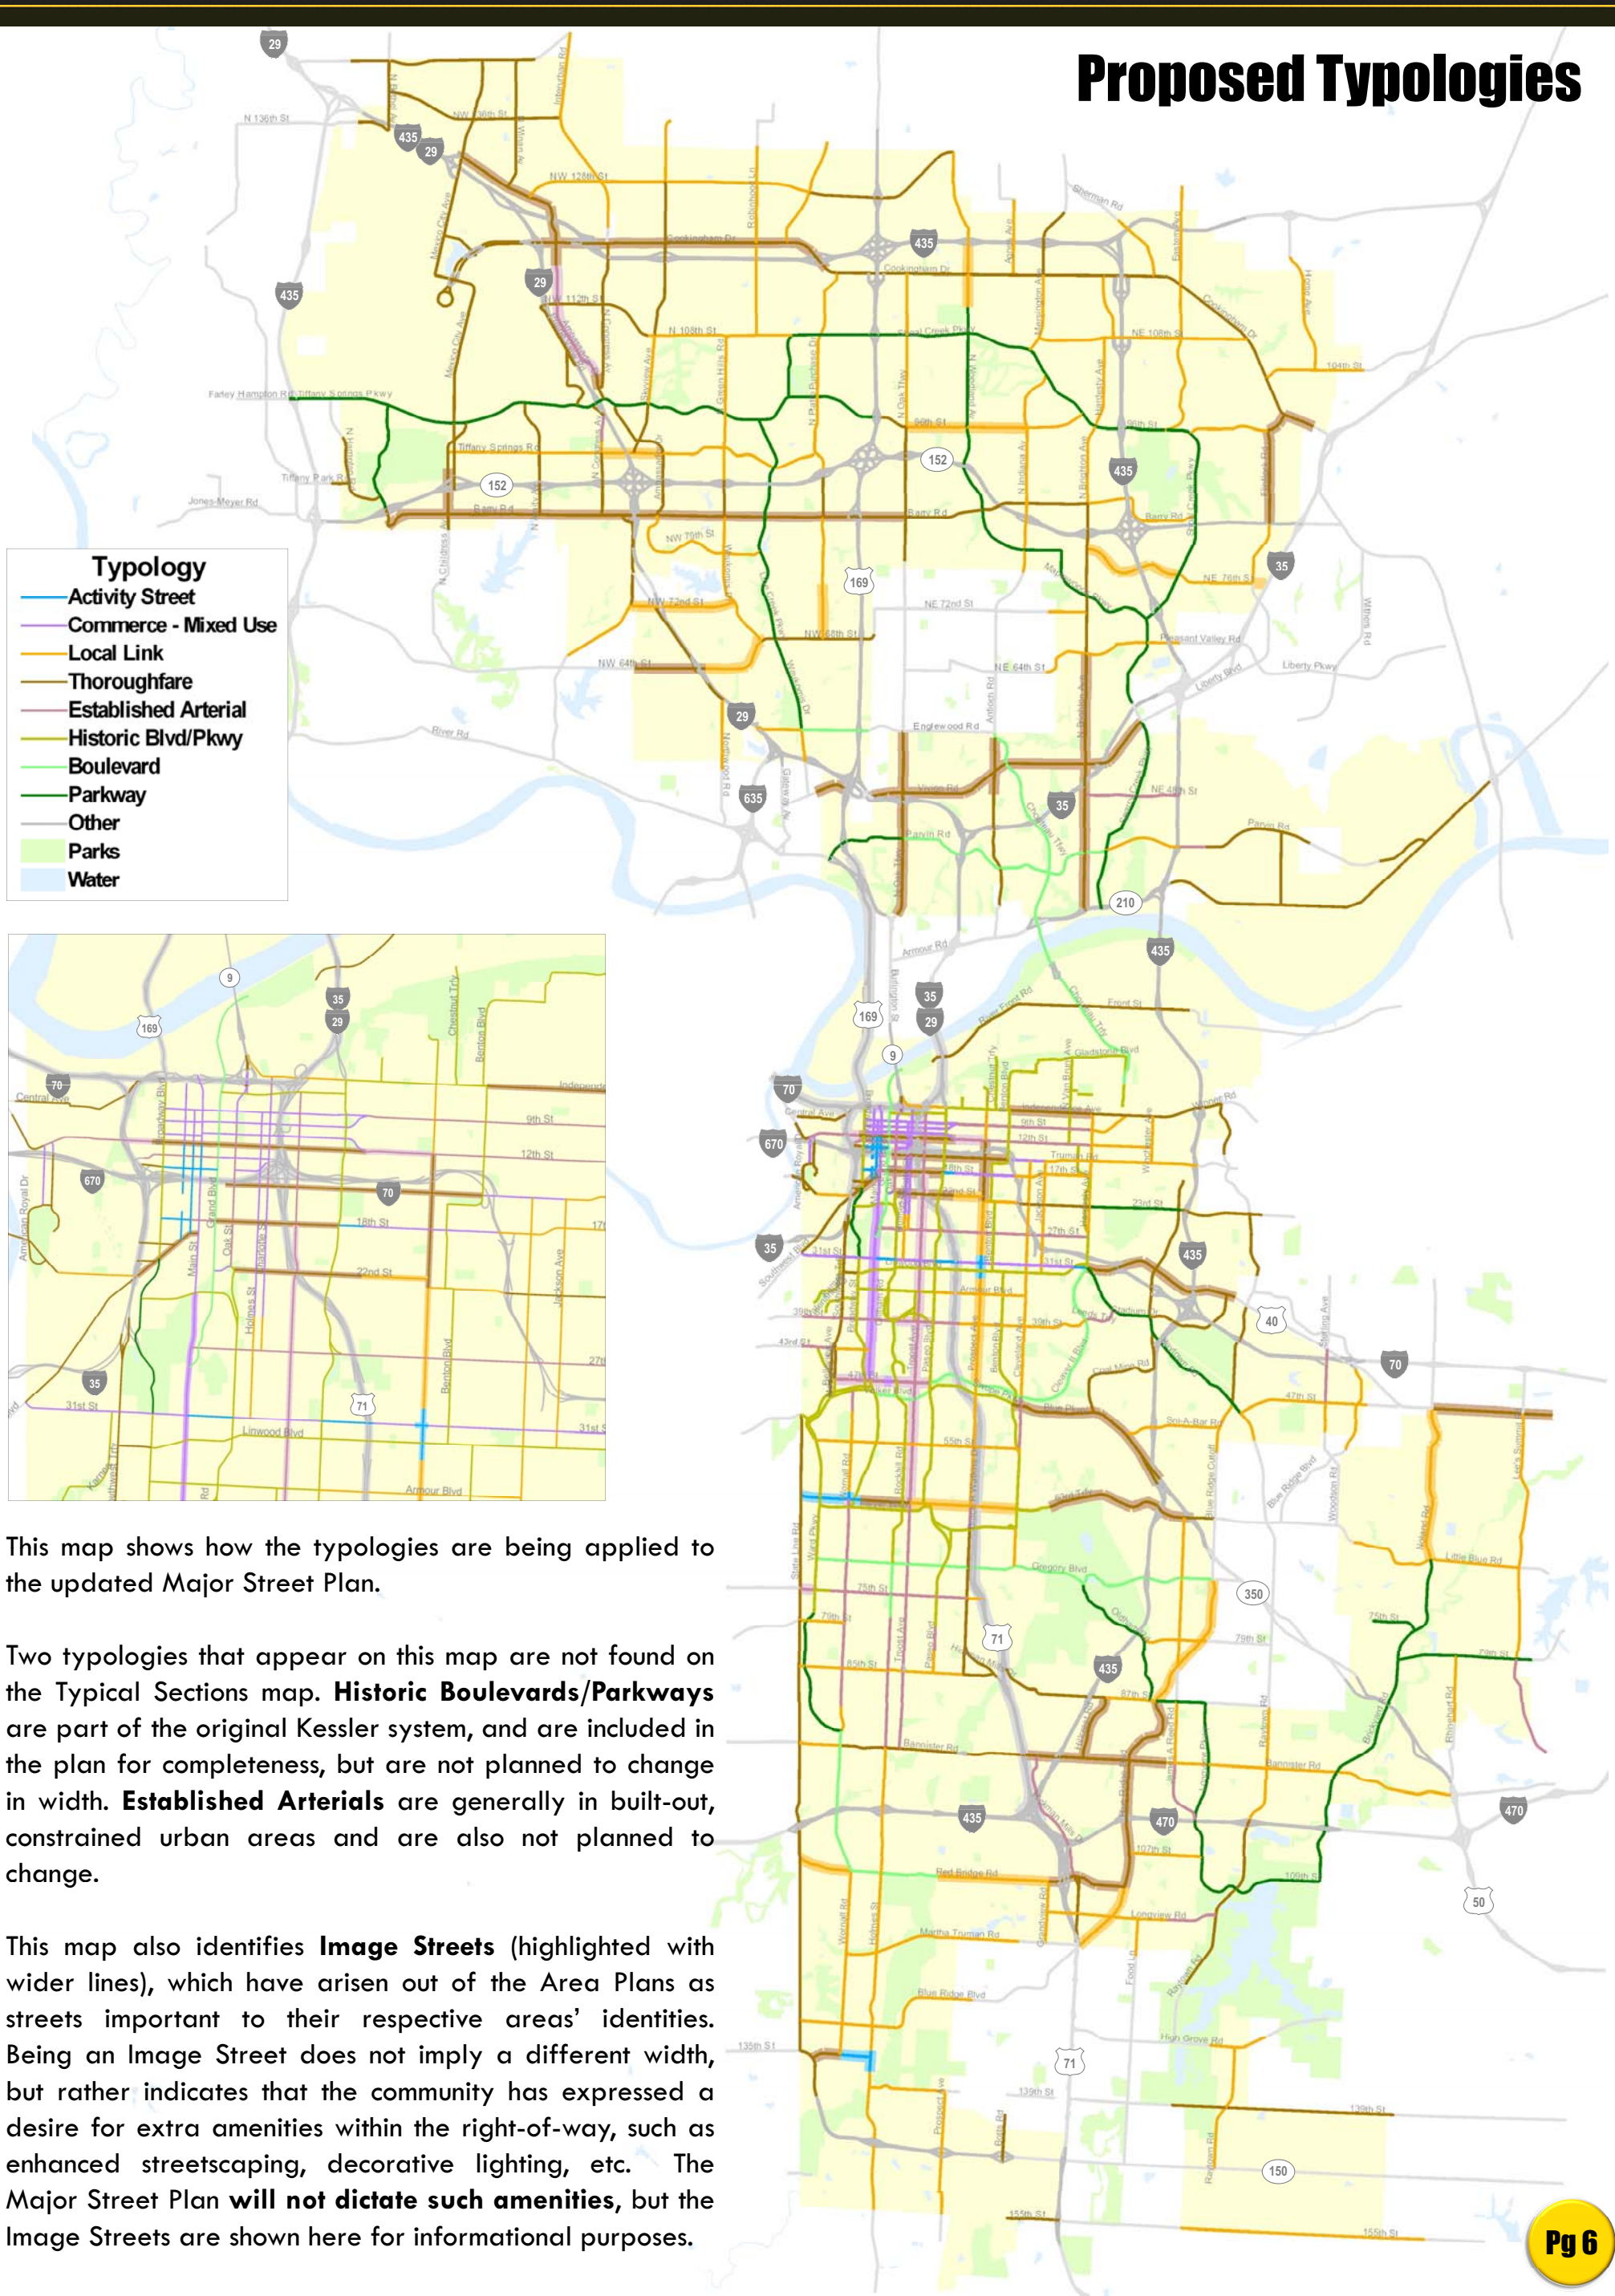
Proposed Typologies



This map shows how the typologies are being applied to the updated Major Street Plan.

Two typologies that appear on this map are not found on the Typical Sections map. **Historic Boulevards/Parkways** are part of the original Kessler system, and are included in the plan for completeness, but are not planned to change in width. **Established Arterials** are generally in built-out, constrained urban areas and are also not planned to change.

This map also identifies **Image Streets** (highlighted with wider lines), which have arisen out of the Area Plans as streets important to their respective areas' identities. Being an Image Street does not imply a different width, but rather indicates that the community has expressed a desire for extra amenities within the right-of-way, such as enhanced streetscaping, decorative lighting, etc. The Major Street Plan **will not dictate such amenities**, but the Image Streets are shown here for informational purposes.
